

EIS UPDATE

BRIDGE REPLACEMENT PROJECT

JANUARY 2020

In December 2003, a draft environmental impact statement (EIS) was published as part of a bi-state collaborative effort. This draft EIS was the first step in complying with the National Environmental Policy Act (NEPA). Currently, the Port of Hood River (Port) is advancing the project to complete the EIS effort and position the project for future funding and construction.

What's new on the project?

- Expecting the Preliminary Navigation Determination to be issued by the US Coast Guard. This preliminary determination confirms the horizontal and vertical clearances for navigation under the replacement bridge.
- Identifying significant cultural resources that may be affected by the Project.
- Continuing coordination with the US Bureau of Indian Affairs to address Project impacts to lands administered by this agency.
- Continuing consultation with Native American tribes on cultural resources, fishing activities, treaty rights, and any other interests identified by the tribes that relate to the Project.
- Engaging the National Marine Fisheries Service, FHWA, Oregon and Washington Departments of Fish and Wildlife, and ODOT to discuss Project impacts to threatened and endangered species and habitat as well as potential conservation measures. These discussions provide fundamental assumptions that will be included in the biological assessment.
- Preparing the Supplemental Draft EIS for policy compliance review by FHWA.

What are the next steps?

- Make determinations of effect on significant cultural resources by the Project.
- Continue to consult with Native American tribes and other federal agencies, as needed.
- Prepare the draft cultural resources report.
- Submit the draft biological assessment for technical review by FHWA, ODOT and liaisons to the National Marine Fisheries Service.
- Integrate cultural and biological baseline conditions, impacts and mitigation into the Supplemental Draft EIS.

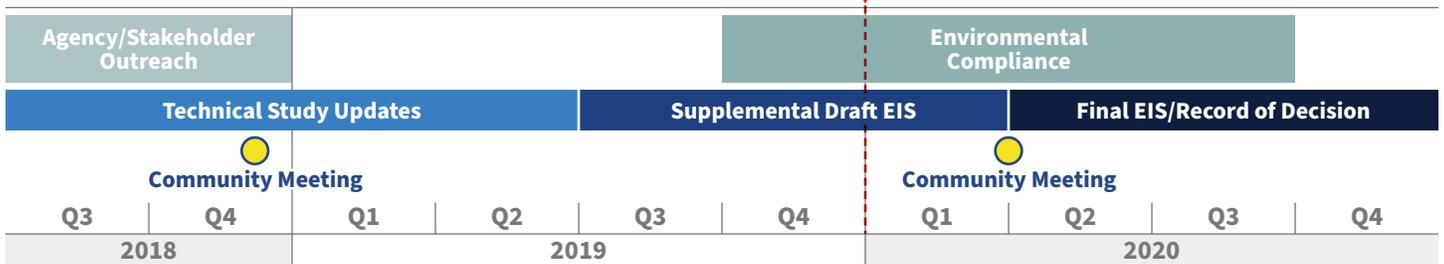

How would bridge replacement benefit the Columbia River Gorge communities?

The Hood River Bridge provides a critical connection for residents and visitors to the Columbia River Gorge National Scenic Area. One of only three bridges spanning the Columbia in this region, the bridge is a critical rural freight network facility for agriculture, forestry, heavy industry and high-tech companies with freight originating throughout the northwest. The existing bridge is nearing the end of its serviceable life and is obsolete for modern vehicles with height, width, and weight restrictions and is also a navigational hazard for marine freight vessels. The bridge has no sidewalks or bicycle lanes for non-motorized travel and would likely not withstand a large earthquake.

If project funding is secured, the new bridge would provide a safe and reliable way for everyone to cross or navigate the Columbia River—by car, truck, bus, bicycle, on foot, or on the water. A new bridge would support a thriving economy and livable communities.
